24-hour arterial stiffness and central blood pressure monitoring

Arterialcare Product Line

Medexpert's new product line covers all fields of hypertension care from diagnosis to patient management with assessing arterial wall characteristics non-invasively during blood pressure measurement. Medexpert Arteriograph24 is a special combination of a state-of-the-art arterial function and stiffness measurement device with a high accuracy ABPM. This is the unique solution for 24-hour monitoring of central and peripheral blood pressure values, augmentation index and aortic pulse wave velocity. Medexpert CBPM24 is a revolutionary technology in the field of ambulatory blood pressure measurement. A validated method for monitoring central systolic blood pressure beyond traditional parameters is offered. Medexpert Arteriograph provides an easy to use and highly reliable oscillometric method for use in the physician's office for a prompt cardiovascular risk assessment by determining vascular age and providing a wide range of arterial function and stiffness parameters, including central blood pressure values, augmentation index and pulse wave velocity in addition to peripheral blood pressure values..
